

LUNCH&LEARN

Smart Safety Design to Prevent Slips, Trips, and Falls

Course outlines different products available for increasing workplace safety and productivity with an overview of current regulatory standards.

LEARNING OBJECTIVES

- 1 Identify the difference between a slip, trip, and fall
- 2 Identify four areas that slips, trips, and falls occur
- 3 Name three agencies that use coefficient of friction to measure and recommend slip resistance
- 4 Name five applications where non slip products are used
- 5 Identify three styles of safety flooring products
- 6 Examine criteria in evaluating slip resistant products for your application

The session is complimentary and educational, not a sales pitch

Lunch is provided free of charge

We travel to your office

The duration is 1 hour total of program and Q&A

You receive 1 HSW credit with the AIA

This presentation is not just for Architects, all participants may request a certificate to self report educational credit. You may also request our online course or a customizable SlipNOT® presentation.
