Anti Slip Vault Covers Incorporated into Direct Traffic Vault Covers

Company: AT&T

Location: Plumas Lake, CA

Industry: Utilities

Website: www.att.com

AT&T is the largest communications holding company in the world with the most advanced global networks. AT&T serves millions of customers, allowing them to travel and communicate easily. AT&T offers voice coverage in more than 225 countries, data roaming in more than 205 countries and mobile broadband in more than 145 countries.

The Situation:

AT&T's contractor provides customized and slip resistant direct traffic vaults and vault covers to telecommunication services and companies. AT&T requires a permanent, non slip coating be applied to the top surface of the vault covers to ensure vehicular and pedestrian safety in all applications. AT&T specifies **SlipNOT®** Metal Safety Flooring for the unsurpassed all metal slip resistant coating.

SlipNOT® Project Summary

- 10 pieces of 3/16" x 38-13/16" x 41-3/4" Grade 3 steel plates with windows and notches
- **SlipNOT®** applied their non slip metal coating to AT&T's customer supplied vault covers, providing a high traction surface for pedestrians.

The Solution:

AT&T's contractor contacted a sales representative from **SlipNOT®** Metal Safety Flooring to coordinate and organize the manufacturing of the custom direct traffic vault covers. The slip resistant vault covers need to snugly fit within the dimension of the traffic rated vault enclosure.

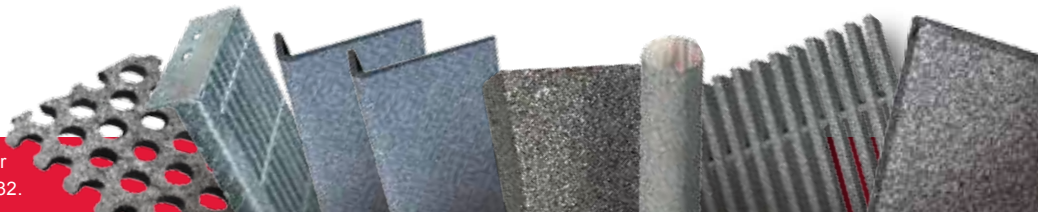

10 pieces of 3/16" x 38-13/16" x 41-3/4" steel plates with windows and notches were supplied to the contractor for installation on the PW/AT&T 36x60 H-44 Direct Traffic Vaults. **SlipNOT®** supplied the cover plates with the medium Grade 2 slip resistant coating in a mill finish. **SlipNOT®** vault covers are available with the Grade 2 (Medium) slip resistant coating or the Grade 3 (Coarse) slip resistant surface.

The Impact:

SlipNOT® steel plates are the standard for vehicular and pedestrian traffic plates nationwide. Slip resistance is required for both vehicular and pedestrian traffic by AT&T because of the wet, oily and slick conditions that accrue over time. Safety is the #1 priority for keeping AT&T employees safe while maintaining the telecommunication connections and general upkeep. **SlipNOT®** vault covers, whether composed of steel or aluminum, have been proven to be the standard through performance by many major telecommunication companies and municipalities nationwide.
