Non Slip Aluminum Stair Treads for Community Hall Entrance

Company: Hegge Construction Ltd.

Location: Fort St. John, BC

Industry: Commercial

Number of employees: 10

Hegge Construction Ltd. is a private construction company that was established in 1978 with 10 employees; serving industrial, commercial, institutional, and general industries.

The Situation:

Hegge Construction was looking for a non slip and durable material to cover an existing wood deck with very limited clearance under the entrance doors at the Grandhaven Hall. The material also needed to be corrosion resistant, as it was intended for outdoor use and may be exposed to weather elements.

SlipNOT® Project Summary

- 1/4" Grade 2 5052 aluminum plate stair treads with a 2" nosing
- SlipNOT®'s slip resistant aluminum stair treads were installed with ease in the Grandhaven Hall door entrance.

The Solution:

After discussing the options with a **SlipNOT®** sales representative it was decided the optimal choice for this entrance would be 1/4" aluminum plate stair treads with a 2" nosing. The 1/4" material allows for a thin enough surface the doors can still swing open and close. The treads were 47- 3/4" x 96" of 5052 H32 aluminum alloy.

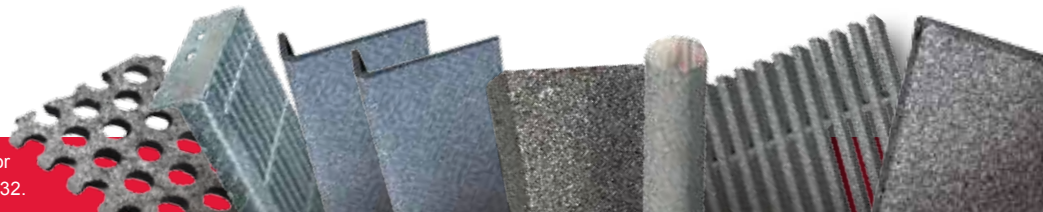

The Impact:

The **SlipNOT®** aluminum treads were installed with ease and met the criteria, "working beautifully", according to the customer. The customer also stated that "The product was high quality and the service from the girls at **SlipNOT®** was equally good. I would definitely use this product again if required."
