Galvanized Steel Grating and Stair Treads for Coca Cola® Plant

Company: The Coca-Cola® Company

Location: Atlanta, GA

Industry: Food and Beverage

Website: www.coca-cola.com

In 1886, curiosity drove John Pemberton, an Atlanta pharmacist, to stir up a batch of a fragrant, caramel-colored liquid. Pemberton took the mixture to the soda fountain at a pharmacy a few doors down, and sold the drink for 5 cents. At the time, only 9 drinks of Coca-Cola were served each day. Today, Coca-Cola® is a global company serving over 1.7 billion servings worldwide daily. Unfortunately, Pemberton passed away not knowing how successful the company would become, serving well into its second century. Coca-Cola®'s mission is to refresh the world, inspire moments of optimism and happiness, and to create value and make a difference. Coca-Cola® is a global business, working locally with over 300 bottling partners worldwide.

The Situation:

An outside contractor that has done previous work for the Atlanta Coca-Cola® plant with SlipNOT®, contacted their sales representative to provide a non slip solution for their packer platform line, which became slippery when wet.

SlipNOT® Project Summary

- Custom-cut Grade 2 19W4 galvanized steel grating and stair treads
- SlipNOT® provided galvanized steel grating and stair treads based on customer supplied drawings, which were utilized on the packer platform line.

The Solution:

The contractor provided specific drawings of the pieces needed for the packer platform line. 19W4 steel grating coated with the Grade 2 steel surface was chosen for the platform. The pieces were cut-to-size based on the drawings and were able to be easily installed in the field. Stair treads formed from steel plate were also utilized for the packer platform line. The treads were cut based on the specifications listed on each drawing, with two ½" diameter through holes that would be utilized during installation. The

stair treads and grating were all galvanized after the slip resistant surface was applied. The galvanizing process allows for the steel surface to be protected against rust and corrosion.

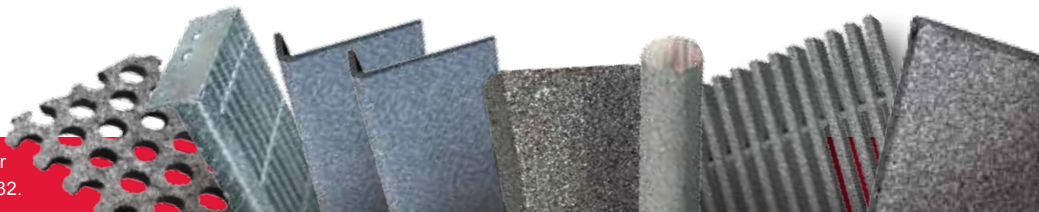

The 19W4 spacing of the grating allows for liquid and other debris to fall through below. The **SlipNOT®** non slip coating created a completely 100% slip resistant surface in all directions, providing safety and security for anyone working on the platform.

The Impact:

The Coca-Cola® Company continues to rely on **SlipNOT®** products for the many projects in their facilities. Coca-Cola® and the outside contractor can continue to rely on **SlipNOT®** products to help prevent slip and fall accidents in their bottling facilities. The galvanized treads and grating will provide a high traction surface that will last for years to come.
