CUSTOMIZED

MILL FINISH

SlipNOT® is produced in a standard mill finish. There are no additives or paints applied to the product besides the slip resistant coating. Mill finish will be the raw material color.

PAINTED

SlipNOT® products can be painted, however, care must be taken in order not to compromise slip resistant properties of the surface. Standard paint is available in black. Custom options are safety yellow and gray upon request. For specialized applications, please contact a *SlipNOT*® representative for priming and painting guidelines.

GALVANIZED

SlipNOT® steel products can be offered with a hot-dipped galvanized finish to prevent corrosion. Galvanizing is performed in accordance with ASTM A123 or other appropriate specifications.

CUSTOMIZED

SlipNOT® can customize products by adding logos or masking off certain areas to specifications allowing for a smooth surface under masked areas with no slip resistant coating. *SlipNOT*® products can easily be customized to job details and specifications.
