

# SAFETY UPGRADE FOR EXISTING CONDITIONS

## RETROFIT OVER EXISTING UNSAFE MATERIAL

*SlipNOT*® products may easily be retrofitted over existing unsafe material such as stair treads or ladder rungs. Products can be welded, bolted or adhered over any type of flooring such as wood, concrete or metal. Products can usually be custom fabricated to retrofit unsafe conditions and meet regulatory compliances and codes with substantial cost savings than replacement.

## REPLACING PRODUCTS OR NEW CONSTRUCTION

Incorporating safety products at the design stage meets regulatory requirements and helps reduce total project costs. Designing *SlipNOT*® into your projects insures safety in every step.
